

Terrorist Network Project

In his article “Uncloaking Terrorist Networks,” Valdis Krebs analyzes the contact information for the 9/11 Terrorists.

<http://journals.uic.edu/ojs/index.php/fm/article/view/941/863>

Calculate degree, betweenness, and closeness centrality for each node in the abbreviated terrorist network I have created for you from the article (terrorist.csv), and produce a nice visual of the graph for the terrorist network.

Based on the measures of centrality, which terrorist do you think is Mohammed Atta – the purported mastermind of the network?

If you were given this terrorist network information and asked to name the top three contacts to target in a raid, which would you name? Explain using the measures of centrality.
